

Digital Video Archive

It was a relatively slow day in the studio today. So I spent the time catching up on the video transfers in my queue. I find that more and more people are requesting transfers of videotapes to computer files on usb drives instead of getting DVD disks. And we are happy to do that for them. And we still process a large number of DVD disks. And we are happy to do that as well. But we do have a third option – developed specifically for us. We call it DVA, Digital Video Archive.

Last year, during our corporate getaway, a few of us teamed together to do a western tribute to our DVA product. I have it posted below. DVA brings the best of the DVD features (chapter markers, authoring capabilities) to a streaming technology. It allows you the ultimate flexibility to watch and share your home movies – wherever you are, whenever you

want. Call us for more information.

And now, for your viewing pleasure, here's the award winning short film: The DVA Kid.

Michael Ondrasik and Home Video Studio specialize in the preservation of family memories through the digitalization of film, videotapes, audio recordings, photos, negatives, and slides. For more information, call 352-735-8550 or visit our [website](#).
